description
probability to die when healthy at 30
probability to die when Normal helicobacter (+)
probability to die when Gastritis helicobacter (-)
probability to die when Gastritis helicobacter (+)
probability to die when Atrophy helicobacter (-)
probability to die when Atrophy helicobacter (+)
probability to die when Intestinal helicobacter (-)
probability to die when Intestinal helicobacter (+)
probability to die when Dysplasia helicobacter (-)
probability to die when Dysplasia helicobacter (+)
probability to die when stage 1 preclinical
probability to die when stage 2 preclinical
probability to die when stage 3 preclinical
probability to die when stage 4 preclinical
probability to die when stage 1 clinical a
probability to die when stage 2 clinical a
probability to die when stage 3 clinical a
probability to die when stage 4 clinical a
probability to die when stage 1 clinical b
probability to die when stage 2 clinical b
probability to die when stage 3 clinical b
probability to die when stage 4 clinical b
probability to die when stage 1 clinical c
probability to die when stage 2 clinical c
probability to die when stage 3 clinical c
probability to die when stage 4 clinical c
